Choose how to study

Read the published course in your browser, or download the format that fits your work. These downloads are hosted with the course on GitHub Pages.

Download	What it contains	How to open it
HTML website ZIP	Rendered student lessons, exercises, navigation, figures, and datasets	Extract the whole ZIP, then open `index.html` in a browser. Reading works offline; browser security may limit search when opened as a local file.
RStudio project ZIP	`20261.Rproj`, lesson and exercise sources, CSV datasets, required assets, configuration, and setup instructions	Extract the whole ZIP, open `20261.Rproj` in RStudio, and follow its README. Run `setup.R` once to install packages.
PDF bundle ZIP	One complete PDF per module, with clickable contents, bookmarks, lessons, and student exercises; linked datasets and supplementary materials	Extract the whole ZIP and open `index.pdf`, or open a module PDF from `modules/`. Keep the folders together for links to datasets and supplementary files.

You can also open the PDF course home online. Each module is a single document: jump through its clickable contents or bookmarks, and use **Contents**, **Previous topic**, and **Next topic** at the bottom of its pages. Topic links within a module stay in the same PDF. The footer shows the page position in the complete module and **Topic p.** for the page numbers used in each topic's own contents.

Module	Complete PDF
1. Introduction to R	Open Module 1
2. Data and descriptive statistics	Open Module 2
3. Probability and distributions	Open Module 3
4. Sampling and estimation	Open Module 4
5. Hypothesis testing and group comparisons	Open Module 5
6. Regression (planned overview)	Open Module 6

Module	Complete PDF
7. Forecasting and applied analysis (planned overview)	Open Module 7

Reduced teaching slides and extended lessons

The slides keep the lesson sequence with shorter text for class use. Use the extended Quarto lessons for explanations, code, and practice.

Module	Reduced PDF	Editable PowerPoint	Extended lessons
Introduction to R	PDF	PowerPoint	Module 1
Descriptive statistics	PDF	PowerPoint	Module 2

The offline downloads also include these linked files.

Before you start

Reading HTML or PDFs needs no R installation. Running and editing the R examples requires R, RStudio, and Quarto. Package installation needs internet access; the teaching CSVs are already included. HTML rendering does not require Python or LaTeX. Open the project, run `setup.R` once, then open a lesson or exercise and click **Render**.

The student project includes the files needed for the active lessons. Instructor answers, local textbook PDFs, original publisher workbooks, and original instructor measurement workbooks are excluded. References to these original sources document provenance; they are not missing student dependencies.

Keep attribution and source notices with shared copies. Textbook excerpts and third-party data retain their original rights.

Return to the course home.
